

A close-up photograph of a honeybee on a bright yellow flower, likely a rapeseed flower, against a soft-focus background of more yellow flowers and a clear sky. The bee is positioned on the right side of the image, facing left towards the flower.

INTERNATIONAL APPEAL

Stop 5G on Earth and in Space

Sign the Appeal: www.5gSpaceAppeal.org

ON CLIMATE, RADIATION, AND THE ENVIRONMENTAL MOVEMENT

On February 10, 2021, the Ninth Circuit Court of Appeals, based in San Francisco, refused to reconsider its decision in [*Juliana v. United States*](#). The child plaintiffs in that case are demanding that the United States stop permitting, authorizing and subsidizing the burning of fossil fuels. The children are demanding that the United States give them back their future. Having lost in the Ninth Circuit, they are planning to appeal their case to the U.S. Supreme Court.

A few weeks ago, another, equally important case was argued before the Tenth Circuit Court of Appeals, based in Denver. In that case, [*Santa Fe Alliance v. City of Santa Fe*](#), we are demanding that a federal law that prohibits the City from protecting its residents from cell tower radiation be struck down as unconstitutional. We, too, are demanding to be given back our future. Win or lose, our case too will likely end up before the Supreme Court.

The Earth is going down rapidly, and on some level everyone knows it. But in the last 50 years, the environmental movement has become fragmented, and must be woven back together if we are to have any chance of survival. We must advocate not just for birds, and amphibians, and whales, and elephants, and bats, and bees, and trees, and human health, each separately, as the world is doing today, but for all of them together, because they are all one. We must work not just against climate change, and radiation, and pesticides, and habitat destruction, and plastics, and air pollution, and groundwater pollution, and deforestation, each separately, as the

world is doing today, but against all of them together, because the root cause is the same.

The workers, millions of them, all over the planet, are attempting frantically to plug thousands of holes in the dam in a futile attempt to prevent it from bursting, instead of recognizing that it is the dam itself that is destroying us, and that it must be dismantled in order that the river once more run free. The river is life, with its blessings and dangers. The dam, growing taller by the minute, is our efforts to multiply the blessings and eliminate all the dangers. The holes are from the pressure by the river to break free. Do we have the wisdom to stop, to begin removing the dam, little by little, to let the water of life flow over the top again, before the dam we are working so hard to maintain is destroyed in a flood that will surely kill us all?

I have spent the last couple of months compiling lists of email addresses for staff, officers, scientists and board members of all of the major environmental organizations in the world, and I am now ready to assemble a team to write letters to them all. To urge them to all start working together again. And to begin a discussion that will result in the creation of Radiation Programs within each of their organizations -- programs to stop the radiation that comes from cell phones, cell towers, and satellites; radiation that until now the world has pretended is not there.

Please Sign Letter to Elon Musk and SpaceX

Stop 5G International is collecting signatures from individuals and organizations on an [Open Letter to Elon Musk and SpaceX](#) asking for a halt to the satellite program. "We write to you today," says the letter, "to ask you to halt the Starlink project because it is so destructive." The letter lists some of the consequences of filling the sky with tens of thousands of disposable satellites:

- radiation
- visible pollution of the night sky
- interference with astronomy and meteorology
- rocket exhaust, contributing to ozone depletion and climate change
- ground and water pollution from intensive use of increasingly many spaceports
- accumulating space debris
- continual deorbiting and burning up of aging satellites, polluting the atmosphere with toxic dust and smoke
- ever-increasing likelihood of collisions

- increasing risk of the Kessler syndrome

The letter and signature form are posted on Stop 5G International's website: <https://stop5ginternational.org/open-letter-to-elon-musk-spacex>.

Protest Planned on March 19 at SpaceX Headquarters

On Friday, March 19, 2021, from 10:00 AM to 2:00 PM, there will be a protest rally against the satellite program in front of SpaceX Headquarters at 1 Rocket Road in Hawthorne, California. This event will kick off and be the centerpiece of the 5G Global Protest Day which is being planned for the next day, March 20, 2021, in countries throughout the world.

The rally will protest the SpaceX satellites, which are intended to provide wireless internet to every corner of the globe, including Antarctica, the oceans, and the Amazon rainforest, using 5G technology. To date, SpaceX has submitted applications to the FCC for 42,000 satellites, and has already launched more than 1,000 of them.

For information about attending the protest, please go to <https://stop5ginternational.org/5g-spacex-satellite-protest-march-19-2021> or email dgoldberg36@gmail.com.

"5G and Our Health" Conference, September 10-12, 2021

On January 23-24, 2021, I was invited to be one of the presenters at the annual Take Back Your Health (TBYH) Conference, which took place online this year and had 2,500 attendees from throughout the world. Because of the interest my presentation generated about the effects of wireless technology on health and environment, a TBYH conference focusing just on this issue -- 5G, WiFi, and wireless radiation -- has been scheduled for September 10-12, 2021. This will also be a virtual conference. Titled "5G and Our Health," the announcement begins:

"We are more connected, yet more unhealthy and unhappy than ever. Environmental scientists and doctors are making connections between wireless radiation, chronic illness, and our environmental crises. We want to answer the urgent questions, 'Have we taken Wi-Fi radiation technology too far?' and 'Can we find a safer way to use the internet to connect?'"

Details and registration information are here:
<https://5g.takebackyourhealthconference.com>.

Correction

In my last newsletter, “The Wrong Pandemic,” I reported that after a few minks tested positive for COVID-19, Denmark decided to destroy all 17 million minks on all of the mink farms in that country. I also reported that “sanity broke out” and that the eradication campaign was halted after only 2.5 million minks were destroyed. A subscriber in Denmark has written to me with the news that the reprieve was only temporary, and that almost all of the 17 million minks were slaughtered. She sent me an article dated November 24, 2020, with the headline, “[Mellem 100.000 og 300.000 danske mink er stadig i live](#)” (“Between 100,000 and 300,000 Danish minks are still alive”).

“The Wrong Pandemic” generated intense feelings among subscribers. The majority expressed their heartfelt thanks: “Bless you for trying to make the world a better place.” “I love it when someone writes sanity the way you do!” “How refreshing to read some sanity and reality for once.” “You have nailed it absolutely perfectly.” “Thank you for the truth!” “Finally a message that doesn’t avoid the truth.” A small minority felt just as strongly the other way, e.g., “You are an insane psychopath.” A few were so offended by what I wrote about masks and COVID-19 that they unsubscribed, and one member of our board of directors even resigned.

I will continue to report the truth as I find it, as a scientist and as a human being working on behalf of all life on Earth.
